

For this project we had to make a collage and silhouette of a person of our choosing. As you can see I chose Donald Trump. We had to take pictures that represented our person and make a collage of them inside our person. We also had to make a silhouette using words that described our person. The words I chose were rich, racist, arrogant, republican, and president. The objective of this project is to test what we have done so far in the class, it taught us how to get more familiar with other tools like the mask tool and other formats like how to adjust to fit the parameters.

Since there were 2 parts to this project, I started with the collage. I did the collage by first selection the actual person, in my case Donald Trump. Then I would delete the person to get a perfect mold of the person. I then imported all of my pictures that I chose that I believed represented Trump the most, like money, Mexico, Trump Tower, China, a wall, etc... I messed around with the images, on the right layer panel, until I was satisfied with my end product. Also to make it easier to see, I decided to put them in separate folders. Lastly we had to blur the background to make it more aesthetically pleasing.

After I finished the collage, I went on to to the silhouette of Donald Trump. I did this by first going back to my original image and again selecting Donald Trump, by going to “base layer” and using Command+Left Click on the mask of “base layer”. This selected everything except Donald Trump, doing this allows me to delete everything except Donald Trump. I would then quickly reselect Donald Trump and use the Horizontal Type Tool and type my chosen words. My chosen words were rich, racist, arrogant, republican, and president. We had to make a new work path by going to Paths=>Make Work Path, and change the tolerance to 1.0. We then copy and paste our 5 words until the meet at both ends. We then would disable all the layers and see an outline of our person. We then would make a background layer of any color we chose.

In conclusion we did all of this in Adobe Photoshop CS6. This is relevant to web design because it teaches us different ways to do edit to make our websites more aesthetically pleasing. I can see myself using this in the future for making more designs for websites or just to mess around with images.
