Welcome to the Class of 2019

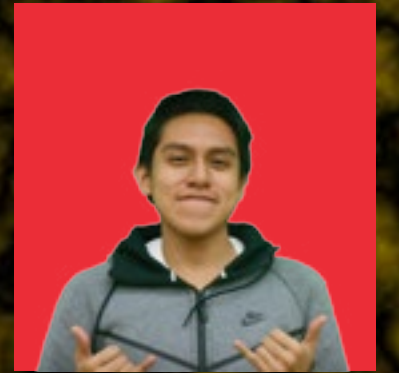

Web Design (Best CTE Class) is a CTE class that we all joined for something. It can be obtaining a CTE Diploma, or gaining the skills for a future career. No matter what, we don't stop and we keep on going. "NEVER GIVE UP!" JOHN CENA We signed up to this great opportunity for our future. We, Web Design students do our best to make it to the top of the world and to fulfill our dreams by taking this course. There has been times where we do stress out on projects, taking down notes for another assignments, communicating with others for fun and full cooperation to get the job done. Knowing that this is going to get harder and harder is the risk that we are willing to take. We all have done something that made this class great. Now here is a full recap so far on the Class of 2019 Web Design Yearbook!

This yearbook will contain projects, labs and trips that we have completed. This yearbook shows our work and what we have done in 2016-2017 in Visual Design, so far that is. This yearbook will also contain some funny and unfortunate pictures for your viewing pleasure and amusement. Finally we would like to tell you this: Enjoy reading our yearbook!

It was the beginning of the school year, no idea what was going to happen to us. We only knew little about the school, our second year as a matter of fact. We first walked into our classes on syllabus day, first, second, third, fourth, fifth, and sixth, period bells rang. We went to our next classes. But it was that specific sixth bell that rang at the end of class that was significant. It meant we walked into the best CTE academy's door way. Mrs Ramirez greeted and congratulated us. We got our first papers. It was about the second week that we had our schedules, then the day came. The day when we got our computers, the most important aspect of Web and Visual Design. We got our first digital assignment. Then the fun began...

"Be nice to nerds, chances are you
will end up working for one"
~Bill Gates

"Success is a lousy teacher. It
seduces smart people into thinking
they can't lose."
~Bill Gates

"The function of education is to teach one
to think intensively and to think critically.
Intelligence plus character - that is the goal
of true education."
~Martin Luther King Jr.

FYI Section

Oh! Why hello there reader of this yearbook, this section will consist of things such as, "Oh did you know Steve is a parkour master!" or "Bob is a certified scuba diver?" Yeah stuff like that. This is the section where you get to learn more about your fellow associates in the class.

Hey did you know that Bryan C is a sneaker-head?
Oh yeah, Kevin M is a cool guy.
For your information Biraj is the camera man.
Ah yes, MD has anxiety issues.
To continue, Alex has a scar on his neck,
Jeff is lazy and goofy,
Lewis is the most boring guy,
Dayanara is an MMA Fighter,
Nathan with the best belt buckles,
Did you know that Rifat can speak multiple different languages,
Ricardo can play the guitar,
Matthew P plays the drums,
Derek is unsocialized,
Andy is one stubborn person,
Tenzin K never talks,
Mahin takes everything like a joke
Christian is the Smash Boy,
Jason is the lucky guy,
Tarik takes many photos,
Alice mean and quiet,
Paola never gives up,
Tenzin C is a dress up girl,
Shafayet is a nerdy freshman in sophomore classes,
Job plays the piano,
Brian V loves tacos,
Saleh always fixes his hair,
Kyle never comes to class,
Jeet likes expensive cars,
Omar has poor vision,
Andoni is a scholar,
Kevin R always overthinks,
Akash always does all the work.
Matthew M is is 3DS master.
Luis loves tacos.

Projects

Projects are a major part of your Visual Design grade, 30% of your grade as a matter of fact. These are the 5 projects we have done so far in our class. By the way, this yearbook you are currently reading, is our 6th project.

Project 1

The first project, should be a simple one, right? Our given task was to make an Andy Warhol image. Take a paper, divide it into 4 boxes, draw the same image in all four of those boxes and give them all different color schemes. Sounds simple, right? As us little newbies first learn to photoshop, it was chaos, we didn't know what to do at all, but the class prevailed and made a pretty cool image.

Project 2

Project 2 was the best and funniest project to do. As seen below Donald Trump was one pick and Michael Jackson was another. For this project we had to make a mask for our person. Then we had to make a silhouette for that person. It sounded very simple yet it was very time consuming. Then after we had our pictures done, we had to write about our documents.

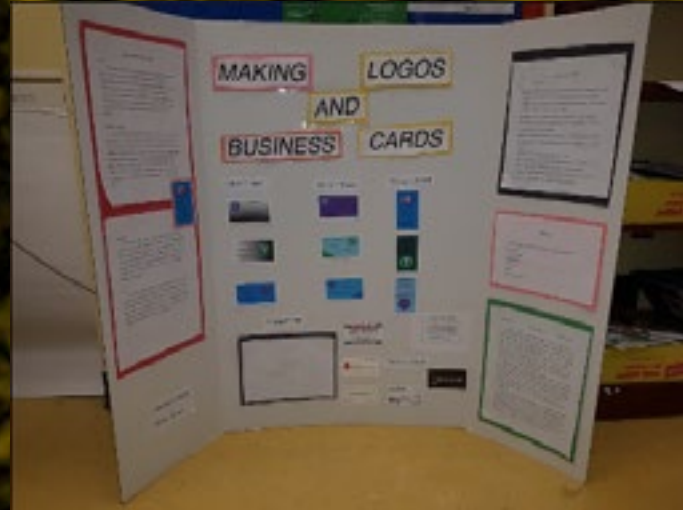

Project 3

Project three was the most difficult project we have had so far. We were given a messed up picture and we had to "fix it". It was very hard at first, but it was like an exponential graph, slow at first and gets easier as we go farther. We all tried to make it as well as we could. This project was difficult because there was so many slightly different colors that would screw us up if we didn't have patience.

Project 4

Project 4, the business card. We had to make a business card from start to finish. Beginning with our logos, layouts, and then making the infamous poster board. We began by scanning our logos and then adding color to all 3 of them. After that we began to make our first draft for our business cards. After the first draft, we went on and made 2 more drafts. Lastly we began to make the posterboard. For the posterboard we had to list all of our steps we took to get to that point.

Labs

Labs are like mini-projects, mainly short and simple, emphasis on short and simple. Labs account for 10% of your grade. Not super heavy on the grade but can really help on increasing it. So far in our Visual Design year, we have had 10 labs, nice and even.

Lab 1

Lab one, the first ever lab that we have done as visual design students. Lab one taught us the basic photoshop tools. It was a fun little beginning lab. We had fruits that we had select and rearrange. Then we had to make a face using the fruits. We called this Melonhead lab.

Project 5

Project five, the brochure. The brochure was one of the most time consuming projects we have done. The brochure had to be under Respect4All. We began by numbering the pages and learning the format. After that we had to gather some information, find some relevant pictures, and begin to make the brochure. After we added some form of background, added some relevant information, and finalized the brochure, you are ready to print. Now you make adjustments to make it look better or slightly change the layout to make the images fit better on the page.

Lab 2

Lab two, another introduction to many photoshop. Lab two introduced us to a very important tool, the quick mask. Our task was to take Mrs. Ramirez's dog, Lancelot, make a proper selection and apply many different masks to it. Different hue, lighting, saturation, etc.

Lab 3

Lab three was a straight forward lab, we were given a PNG of a car (top right corner) and we had to apply effects to copies of that car. Effects like black&white, saturation change, replace color, and hue change. We had to name the changes on the pictures.

Lab 4

Lab four was a fun lab to do and create. We were given cameras and we had to take pictures. One high point, low point, eye level, close up, and landscape views photos. We then imported the photos to a computer and put them together into a single lab assignment. It was a fun lab.

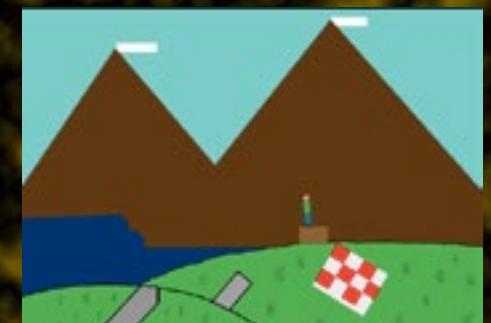

Lab 5

Lab five was a long and tedious lab, we began by hand drawing an image and then scanning it then photoshopping to bring it to life only using the brush. This was a test of our previous knowledge on Photoshop to make something nice.

Lab 6

Lab six. Do you remember that hand-drawn image you used for Lab five, well it is coming back. With this lab you have to bring your image to life using nothing but vector shapes. It was a challenge to do but we managed to finish. We did this lab using the vector shapes, which gave us a variety of options yet made it more complicated to fill in odd shapes like the palm tree leaves as shown in Lab five. This was a challenging and time consuming lab to complete but rewarding at the end.

Lab 7

Lab seven, the filter lab. In this lab assignment, we were taught how to use the filters in Adobe Photoshop. This was a fun lab because we could see what monstrosity we could make with a picture and a filter. This was a pretty easy lab because for most of us it only took one period to finish.

Lab 8

Lab eight taught us how to use the healing tools in Photoshop. We also had to use the healing tools to photoshop four different pictures all using different tools. This lab also helped us make a future project.

Lab 9

Lab nine was the animated brochure. We took our brochure from project 5 and used InDesign's animations to make it better for the web. This lab was very straight forward and helped us to understand InDesign better.

Lab 10

Lab ten was learning to insert page numbers and learning how to print a booklet. This lab was tricky at first because it was fairly unclear on how it worked, but it did at the end. It was a straight forward lab.

The CTE Expo

Everyone remembers this little event right? The sophomore's first year at impressing the freshmen to join our academy. That wonderful event. The CTE Expo is a major interviewing process that the sophomores, juniors, and seniors have to do to the freshmen. That was us last year believe it or not. The sophomores showed off our business cards and some projects and the juniors and seniors showed off their websites and minigames. Within a personal opinion, the freshmen didn't seem very interested, only a few showed some sufficient interest into this academy. The CTE Expo served multiple purposes, the primary one to bring in a new class of visual designers, the more low key one was to practice our interviewing skills on younger people. Overall the CTE expo was a one day fair that we got to practice some future skills in.

CLASS TRIPS

One of our class trips was to Ten80 at York College. It was challenging. There were lots of people there. When you participated at one events, you got a ticket, which was a chance to win a prize at the end. We were divided into 5 groups with different categories. We had to come up an idea of what our project would be about. After that we went to go and present our project to the people. We then got our lunch and headed back to school.

Another one of our class trips was to Lehman College for the LOFT STEM Symposium. This was a fun little trip. While we were there there were soldiers with a hispanic heritage. They primarily talked about leadership. We were given situations in which we had to chose if we would cheat to win or not cheat and fight to win. We chose not to cheat. After we talked about those situations we got something to eat. After eating, there were some people who spoke about their pasts with STEM and talked how it helped them get to this point in their lives. Lastly we had a raffle and went back to school.

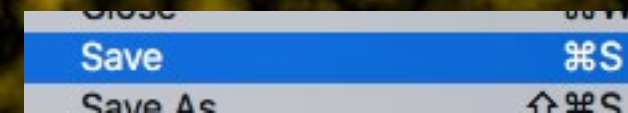

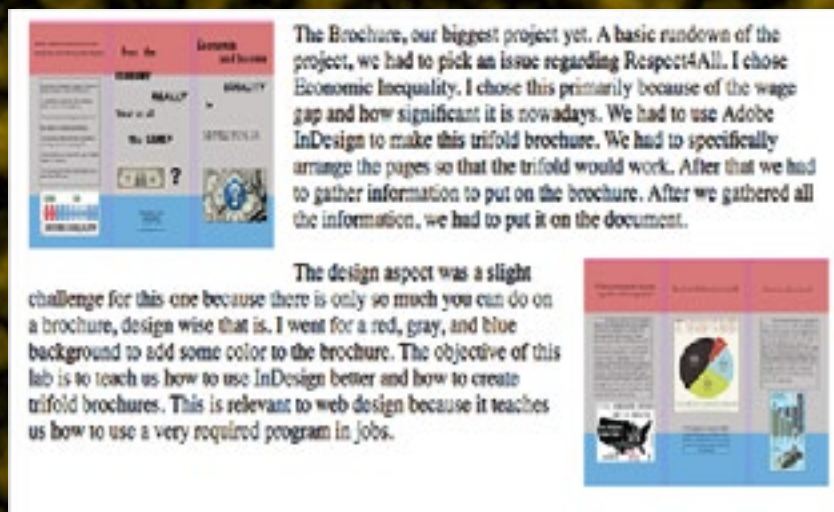

Class Trip to the MET

On February 17th 2017, the sophomore class of Web Design visited the Metropolitan Museum of Art, or for short The Met. We have learned many forms of art and visual design of other artists from different time periods and civilizations. We got to see artwork from many different civilizations, artists, and time periods. We got to see sculptures, paintings, and arrangements, as shown on the pictures below. We got to see artwork from Ancient Egypt, Ancient Greece, Africa, and some modern art.

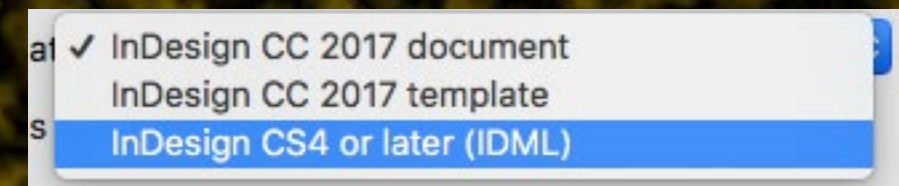

Reflection Journals

The infamous reflection journals, the most tedious assignment in Web Design. Reflection journals are required by Mrs. Ramirez to, a way to remember what you have done in your assignment and to add to add to a portfolio. A quick rundown of what reflection journals are, you have to go to Blogger.com and make a blog for each year of web design, then you have to make a new post for every assignment you get. For example if you do a lab, you make a new post and talk about it in 2 paragraphs. It sounds very simple yet very tedious, which it is. Reflection journals can also be useful because in this scenario, there is an option to look back at reflection journals and remember what you did for that specific lab or project or even WBL(Work Based Learning) workshop.

Command plus S, the notorious keys. They can completely screw you over or save yourself. The Command S key has lots of a back stories. Once when I was home, I was finishing up an assignment for Web Design. Everything was going alright, but then as I was about to finish, my power went out, causing my computer to shut down. It normally is no problem, but I didn't hit those two keys. I had to restart my entire assignment. I cried a little bit.

The IDML format can screw everyone over. Doing an InDesign document on another computer and not saving it correctly will force you to not open it on another computer. The same thing happened with this project. I saved it as the normal InDesign document and I couldn't open it at school. I cried a little bit when I couldn't open it.

END NOTES

Alexandru Jacob- This first year of our visual design was a tough one. Yet this year was only an introduction, next year will only be more tough, which is a true challenge that I think most of us are willing to take that challenge. Mrs Ramirez was tough on us to make us hard workers to try to finish our assignments, she took us on trips. Our class became our family, constantly asking each other, annoying each other, and helping each other.

MD Bhuiyan-Congratulations to everyone! We made it through The first year of our web design class. Even though the class was tough.... we had a lot of fun! The year passed by and we didnt even realize it. It was fun being with everyone. Working together and bothering for help. It feels like a family. All of the students helped each other working together, Agreeing disagreeing. And it was all worth it. We barely had free time but all the work we did was fun also important for our future. Mrs, Ramirez may look mean and scary but she is a nice teacher. She helps us when we need help, stays after school for us so we can finish our work, she also took us to a lot of trips and they were fun. She was a great teacher. She gave us a lot of opportunities for internship, college affair, job opportunities.

Matthew Murillo-This year was an interesting year. There has been many things that I have learned in this class and I had a good experience with my classmates. We will always have good times and I will love to continue that trend with everyone. We will always go one step forward till our graduation and I want to go with that journey with my classmates. I'm saying this in the deepest part of my heart, and I would like to say "I love this class and I don't want it to end."

Jeff Quiroz- This year was an interesting year. Odd conversations were formed. I learned about certain aspects of creation and how to use them, and I managed to begin to critically think. The works I have completed, if any, challenged the little creativity I have and it may have broadened my criticism. I know more about myself that I have before.
